

Quick Facts:

Product Name:
MycoApply®
Injector Endo

Formulation:
Suspendable Powder
Endomycorrhizal Fungi
on a Soluble
Humic Carrier

Concentration:
17,600 Endo
Propagules per gram
7,983,219 Endo
Propagules per lb.
(*Glomus intraradices*,
Glomus mosseae,
Glomus aggregatum,
Glomus etunicatum)

Packaging Options:
100 g. Bags (Case = 10)

Applications & Uses:
Horticulture,
Greenhouse, Nursery, Turf,
Landscaping, and/or
Restoration

1.0 Overview:

MycoApply® Injector Endo is a concentrated suspendable mycorrhizal inoculant that contains propagules of four species of arbuscular mycorrhizal fungi (AMF) on a humic¹ carrier. The AMF in this product form symbiotic associations with the root systems of plants, improving the overall productivity and health of your crop's rhizosphere (the region of soil in the vicinity of plant roots).

Arbuscular mycorrhizal fungi form symbiotic associations with approximately 85% of plant species on earth, including most horticulturally important crops.²

MycoApply Injector Endo contains 17,600 propagules per gram of the following four AMF species: *Glomus intraradices*, *Glomus mosseae*, *Glomus aggregatum*, *Glomus etunicatum*.

¹Humic Acid content may aid in the uptake of micronutrients.

²For additional crop recommendations other than those listed in this label, contact your Mycorrhizal Applications Sales Account Manager.

2.0 Application Instructions:

MycoApply® Injector Endo is a suspendable humic powder mycorrhizal inoculant that is recommended for the following applications: Greenhouses, Nurseries, Turf, Landscape, and/or Restoration. This product can also be applied directly to plants grown in containers, planters, or ground via injector or spray tank.

- *MycoApply Injector Endo* can be used on newly seeded, transplanted or established crops, and with newly planted cuttings. The goal is to make physical contact between the active ingredients and the growing roots. Direct the application of *MycoApply Injector Endo* near the living root or seed of the plant, where new roots will grow through it.
- *MycoApply Injector Endo* improves the availability of nutrients and water to plants grown in media and soil. Higher levels of available phosphorus can delay the development of the symbiotic relationship with the plant resulting in a delay in the benefits that the mycorrhizae will provide to the plant.

Application Preparation:

Application equipment must be clean and free of any residue or previous product deposits before applying *MycoApply Injector Endo*. Fill application tank ¼ to ½ full of water. Add *MycoApply Injector Endo* directly to the tank. Mix thoroughly to fully disperse the product. Fill tank with remaining amount of water and continue stirring until mixture is uniform. Once dispersed and suspended, continued agitation is required (mechanical or hydraulic). Avoid storage of mixed spray solutions for periods greater than 24 hours. Re-suspension of the spray solution after storage is critical.

IMPORTANT: After mixing *MycoApply Injector Endo* with water, agitate vigorously. Maintain continuous agitation in the mix tank or stock solution container during mixing and application to assure a uniform suspension. When applying *MycoApply Injector Endo* mechanically, blockage may occur when using screens smaller than #50 mesh. Ensure any screens smaller than #50 mesh are removed during application preparation.

Horticulture Injection Systems:

When using a 1:100 ratio horticulture injector system, mix one 20 g Scoop of *MycoApply Injector Endo* per 1 gallon of water in the stock solution container, following the APPLICATION PREPARATION instructions. This will achieve the target product concentration of 20 g of *MycoApply Injector Endo* per 100 gallons of water for the final application suspension.

Key Benefits:

Root System Growth

- Mycorrhizal fungi support faster plant establishment
- Mycorrhizal hyphae access water and nutrients beyond the root zone and deliver them to the plant's vascular network
- Increases root absorption area
- Increases overall root biomass

Nutrient Efficiency

- Mycorrhizal hyphae absorb and actively deliver nutrients directly to the roots
- Improves utilization of soil nutrients including:
 - Nitrogen
 - Phosphorus
 - Potassium
 - Micronutrients

Water Absorption

- Mycorrhizal hyphae absorb and transport soil moisture from beyond the root zone to the plant's roots
- The mycorrhizal symbiosis increases the plant's effective water utilization capability:
 - Improved tolerance to stress
 - Greater resistance to drought

Application Instructions (continued):

Application Methods:

MycoApply Injector Endo is designed to be used with Horticulture Injector Systems, and applied via various application methods, including but not limited to:

- Drench Watering Systems
- Soil Drench via Overhead Boom Sprayers or Sprinklers
- Soil Drench via Handheld Backpack or Ground Spray Equipment
- Drip Irrigation Equipment
- Hydromulch or Hydroseed slurry inclusion
- In-Furrow Application at Planting

ALWAYS READ THE PRODUCT LABEL BEFORE USE FOR COMPLETE APPLICATION INSTRUCTIONS, RATES, AND SAFETY PRECAUTIONS.

3.0 Guaranteed Analysis:

CONTAINS NON-PLANT FOOD INGREDIENTS

Soil Amending Guaranteed Analysis

Total Active Ingredients:	20.1%
Endomycorrhizal fungi: (17,600 Propagules per g. Total)	
<i>Glomus intraradices</i>	(4,400 propagules/g)
<i>Glomus mosseae</i>	(4,400 propagules/g)
<i>Glomus aggregatum</i>	(4,400 propagules/g)
<i>Glomus etunicatum</i>	(4,400 propagules/g)
15% Humic acid derived from leonardite	
Total Inert Ingredients:	79.9%

"This Product is not a Plant Food"

4.0 First Aid:

Warning: Nuisance dust; may form combustible dust concentrations in air. Avoid formation of dust. Avoid breathing dust. Use outdoors or in a well-ventilated area.

First Aid Measures	
If on Skin:	Wash with soap and water. Then apply hand lotion. Exposure to skin may cause mild irritation and dry skin.
If in Eyes:	Rinse opened eye for several minutes under running water. If symptoms persist, consult a doctor.
If Swallowed:	Wash out mouth thoroughly. Consult with doctor if symptoms persist.
If Inhaled:	Remove victim to fresh air and keep at rest in a position comfortable for breathing. Consult doctor if symptoms persist.

5.0 Physical Properties:

- 5.1 **State:** Powder
- 5.2 **Appearance:** Dark Brown / Black
- 5.3 **Odor:** Mild

6.0 Storage & Handling:

- 6.1 **Storage:** Store in a dry, cool, well ventilated area. Keep sealed in a properly labeled container. Do not expose to temperatures in excess of 140°F or 60°C.
- 6.2 **Handling:** Minimize dust generation and accumulation. Ensure good ventilation/exhaustion at the workplace.
- 6.3 **Disposal:** Dispose of contents/container in accordance with local/regional/national/international regulations.

7.0 Warranty & Disclaimer:

To the extent consistent with applicable law, seller makes no warranty, express or implied, of merchantability, fitness, or otherwise concerning the use of this product other than as indicated on the label. To the extent consistent with applicable law, user assumes all risk of use, storage, or handling not in strict accordance with accompanying directions.
