

ARBORMECTIN

ArborMectin Insecticide

1 quart

Part #13-4578

ArborMectin is a tree injected insecticide for two year control of key pests such as emerald ash borer, caterpillars, and other wood boring insects. ArborMectin can be applied through refillable micro-injection systems and is the next generation of emamectin benzoate for tree care. It is used for the preventive and remedial control of listed insect pests on palm, conifer, and hardwood trees.

- A soluble liquid concentrate formulation, which allows for faster uptake at the time of application.
- A Non-Restricted Use Pesticide emamectin benzoate formulation labeled for tree care
- Treatments are best performed during the growing season when the tree is in full-leaf
