

GreenClean[®]PRO

Powerful Algae Control

GreenCleanPRO is the only granular peroxide-based algaecide with a broad-spectrum label. This professional strength formula controls algae and cyanobacteria on contact. GreenCleanPRO is an integral part of an entire water management system. It can be used by itself, in conjunction with biological products or in rotation with other algaecides to help maintain clear, algae-free waters. GreenCleanPRO is designed for use in lakes, potable water reservoirs, ponds and other large bodies of water as well as on non-painted surfaces such as concrete, docks, piers, shorelines and walkways.

Formulated with a stabilized peroxygen chemistry that acts as a powerful algaecide without harming the environment, GreenCleanPRO reacts with natural elements of surface waters and algae immediately, releasing oxygen and leaving no time for tolerance build up to occur. This reduced-risk chemistry is ideal for all bodies of water, even those with sensitive fish populations. GreenCleanPRO can be used in copper restricted areas, has no use restrictions and a short retreatment interval allowing waters to be used without interruption after treatment.

Features & Benefits

- Kills algae on contact; results seen within 60 seconds
- Effective against planktonic and filamentous algae and cyanobacteria
- For preventative programs
- Biodegrades completely
- Heavy duty, poly bag

GreenCleanPRO Program

Step 1: Shock Treatment	Step 2: Maintenance Treatment	Step 3: Spot Treatment
Spring/early summer	Every 2–4 weeks or as needed based on level of control	Apply as needed to areas of regrowth

Granule Comparison

GreenCleanPRO is manufactured and packaged with product quality and functionality in mind. A uniform granule size, no dust or clumping makes for easy and clean and consistent application.

Application Rates

Shoreline Spot Treatments for Irrigation Ponds

50–100 lbs. for every 100 ft. of shoreline, 16-ft. width

Application Rates	
Targeted Species*	Lbs./Acre Foot
Cyanobacteria	3–16
Cyanobacteria and some species of green algae	17–30
Cyanobacteria and more species of green algae and some species of diatoms	31–50
Cyanobacteria, green algae and diatoms	51–100

*The above factors will determine that amount of GreenCleanPRO. The higher the dosage of GreenCleanPRO, the higher the control level. Repeat applications may be necessary.

Dosage Rate Factors

- Type of algae present
- Amount of algae growth
- Light intensity
- Water quality and clarity
- Temperature of water
- Amount of inorganic and organic matter

Non-Factors

- Salinity
- Water pH
